Tool Supported Test Frameworks in **TTCN-3**

Ina Schieferdecker, FOKUS
Theofanis Vassiliou-Gioles, Testing Technologies
Røros, June 2003

Outline

<testing_tech>

- Overview of TTCN-3
- Test Frameworks in TTCN-3
- Tooling Aspects

TTCN-3 (1)

<testing_tech>

- Testing and Test Control Notation
- The standardised test specification and test implementation language
- Developed based on the experiences from previous TTCN versions
- Applicable for all kinds of black-box testing for reactive and distributed systems, e.g.,
 - Telecom systems (ISDN, ATM);
 - Mobile (telecom) systems (GSM, UMTS);
 - Internet (has been applied to IPv6);
 - CORBA based systems;
 - Java, XML, ...

TTCN-3 (2)

<testing_tech>

- Enable testing of current and upcoming technologies
- Consolidate test concepts
- Wider scope of application
 - applicable to many kinds of test applications not just conformance, i.e. also for development, system, integration, interoperability, scalability ... testing
 - applicable in the telecom and datacom domain
 - used both for standardized test suites ... and as a generic solution in software development

Main Aspects of TTCN-3

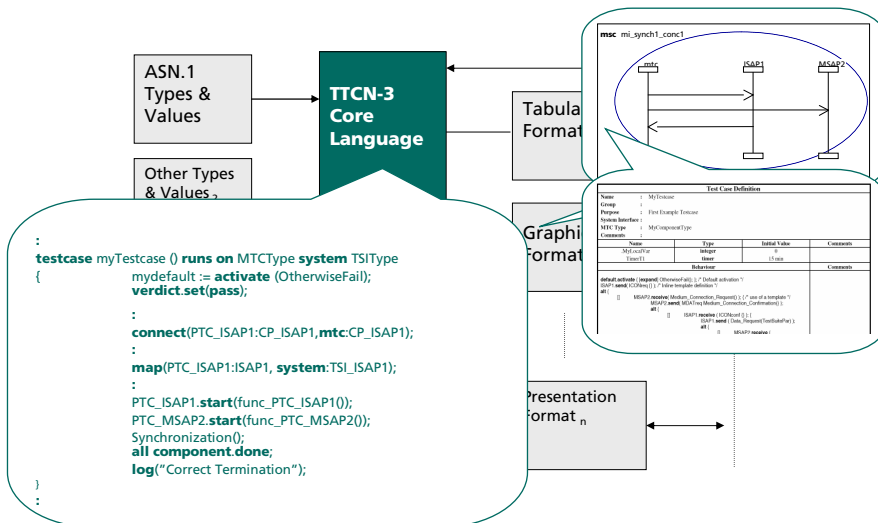

<testing_tech>

- Triple C
 - **Configuration:** Dynamic concurrent test configurations with test components
 - **Communication:** Various communication mechanisms (synchronous and asynchronous)
 - **Control:** Test case execution and selection mechanisms
- Improved
 - Harmonized with ASN.1
 - Module concept
- **Extendibility** via attributes, external function, external data
- Well-defined syntax, static and operational semantics
- Different presentation formats

Basic Elements of TTCN-3

<testing_tech>

- **Module** covers declarations and control
- **Templates** (test data description) and **matching mechanisms** (pattern matching)
- **Test configurations**
 - Formally defined interfaces to the SUT
 - Dynamic creation of test component
 - Concurrency to describe distributed test setups
- **Test cases**
 - Small (complete) separate compilable programs
 - Share (type and data) information
- **Test verdicts**

The TTCN-3 Execution Interfaces

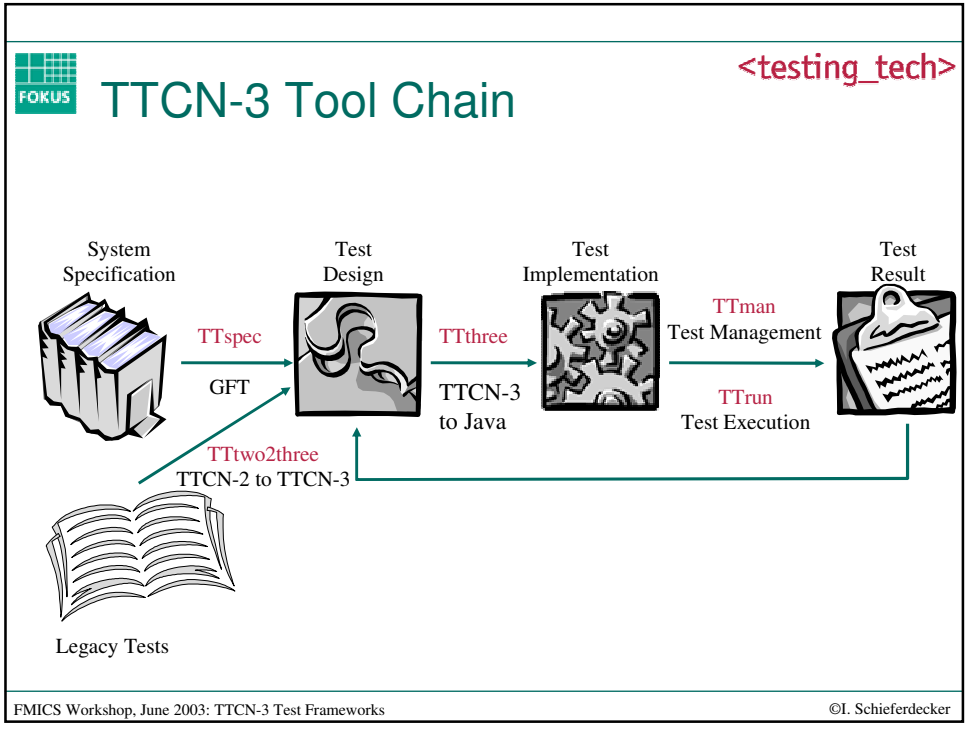

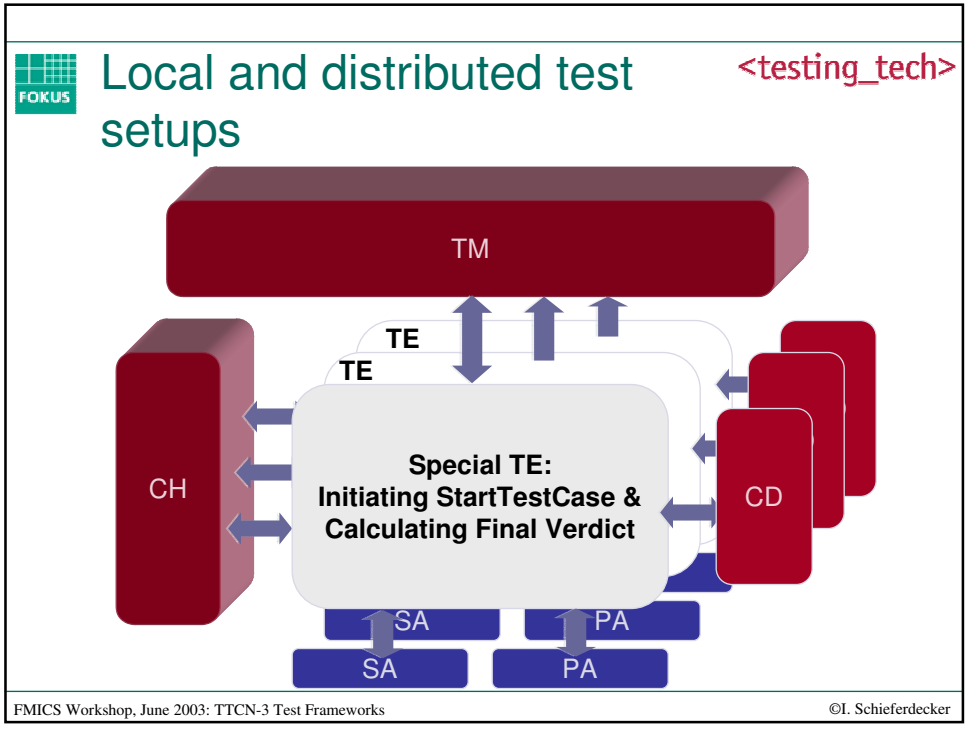

<testing_tech>

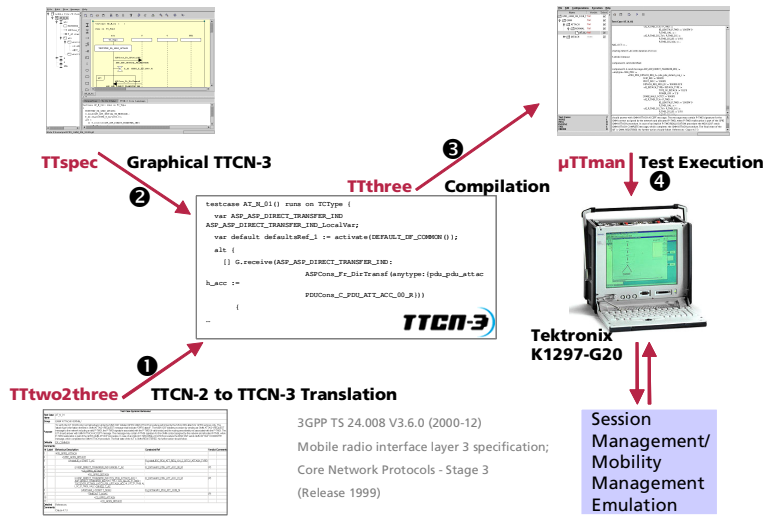

- **Standardized adaptation** for management, component handling and communication, external data representation with encoding/decoding and logging **for local and distributed test setups**
 - **Well-defined interfaces** as a set of operations independent of the target, i.e. SUT, processing platform, implementation language, etc.
 - Code from **any compiler** supporting/using this interface can be executed on **any test platform/test device**, which supports/uses this interface
- TRI – TTCN-3 Runtime Interface
➤ TCI – TTCN-3 Control Interfaces

<testing_tech>

- TTCN-3 is a powerful test specification and implementation language
- Test frameworks enable
 - The customization and extension of test case collections
 - The reuse of test patterns in new and modified test contexts
- Test frameworks can be directly supported in TTCN-3 with test compiler and execution tools
- Further examples beyond GPRS to be studied
